

TOTAL POINTS 10

It is used to keep track of the hyperparameters that we are searching over, to speed up computation. We use it to pass variables computed during backward propagation to the corresponding forward propagation step. It contains useful values for forward propagation to compute activations. It is used to cache the intermediate values of the cost function during training. We use it to pass variables computed during forward propagation to the corresponding backward propagation step. It contains useful values for backward propagation to compute derivatives. Among the following, which ones are "hyperparameters"? (Check all that apply.)

6. Consider the following neural network.

How many layers does this network have?

- $igoreal{igoreal}$ The number of layers L is 4. The number of hidden layers is 3.
- \bigcirc The number of layers L is 3. The number of hidden layers is 3.
- igcup The number of layers L is 4. The number of hidden layers is 4.
- \bigcirc The number of layers L is 5. The number of hidden layers is 4.
- 7. During forward propagation, in the forward function for a layer l you need to know what is the activation function in a layer (Sigmoid, tanh, ReLU, etc.). During backpropagation, the corresponding backward function also needs to know what is the activation function for layer l, since the gradient depends on it. True/False?

1 point

1 point

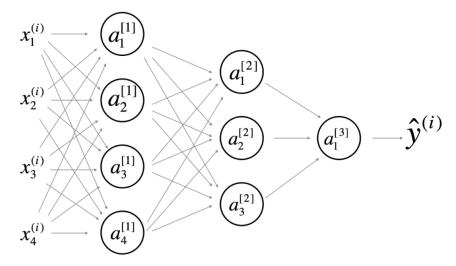

- True
- False
- 8. There are certain functions with the following properties:

1 point

(i) To compute the function using a shallow network circuit, you will need a large network (where we measure size by the number of logic gates in the network), but (ii) To compute it using a deep network circuit, you need only an exponentially smaller network. True/False?

- True
- False
- $9. \quad \hbox{Consider the following 2 hidden layer neural network:} \\$

1 point

Which of the following statements are True? (Check all that apply).

- ${f V} \ W^{[1]}$ will have shape (4, 4)
- lacksquare $b^{[1]}$ will have shape (4, 1)

$oxed{\ }$ $W^{[1]}$ will have shape (3, 4)	
$igsqcup b^{[1]}$ will have shape (3, 1)	
$igwedge W^{[2]}$ will have shape (3, 4)	
$igsqcup b^{[2]}$ will have shape (1, 1)	
$oxed{ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$	
$igsim b^{[2]}$ will have shape (3, 1)	
$oxed{ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$	
$igspace{igspace}{oldsymbol{b}} b^{[3]}$ will have shape (1, 1)	
$igwedge W^{[3]}$ will have shape (1, 3)	
$igsqcup b^{[3]}$ will have shape (3, 1)	
10. Whereas the previous question used a specific network, in the general case what is the dimension of W^{[1]}, the weight matrix associated with layer <i>l</i> ?	oint
$igotimes W^{[l]}$ has shape $(n^{[l]}, n^{[l-1]})$	
$igcirc$ $W^{[l]}$ has shape $(n^{[l+1]}, n^{[l]})$	
$igcup W^{[l]}$ has shape $(n^{[l-1]}, n^{[l]})$	
$igcup W^{[l]}$ has shape $(n^{[l]}, n^{[l+1]})$
